ProcureFlow

STAFF HANDBOOK

From site request to vendor payment, on one trail.

Every requisition raised at Macwest walks the same six stops. Nothing skips a stop, every decision carries the name of whoever made it, and the person who raised it can see exactly where it is sitting. This handbook shows you your part of it.

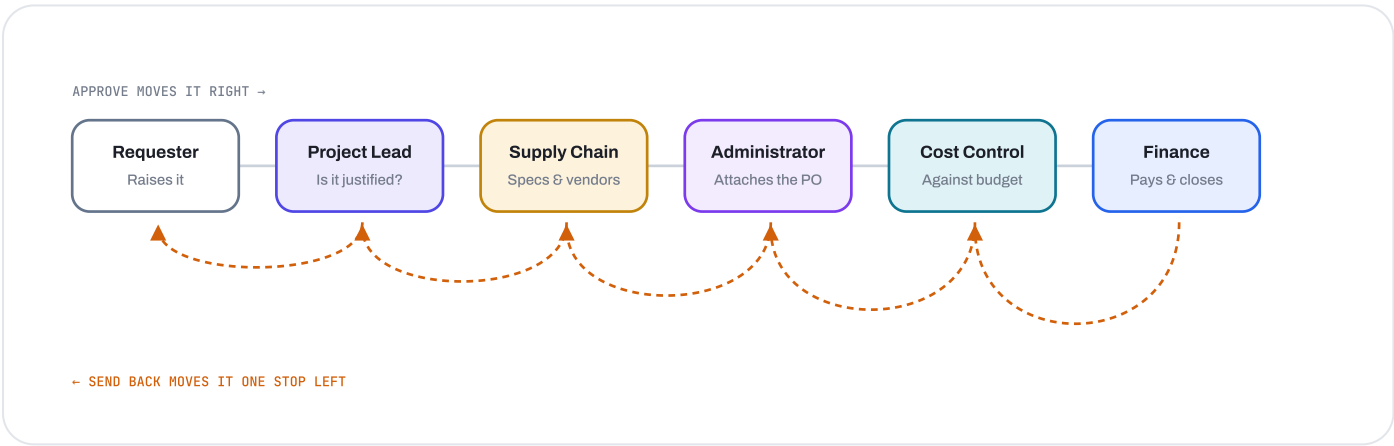

6 stops | All amounts in GHS | Purchase orders raised in Odoo | Email + in-app alerts

---

01 — THE ROUTE

Six stops, always in this order

A requisition moves forward only when the stop it is sitting at approves it. Until then it is invisible to everyone further down the line — a Cost Control officer never sees an order the Project Lead has not cleared.

Approve — hands it to the next stop

Send back — returns it one stop, with your reason

02 — YOUR PART

Who does what

Your role decides which screen you land on after signing in and which requisitions you can act on. Everyone sees the same requisition detail — the same line items, the same attached documents, the same history — so nobody decides with less information than the person before them.

Engineer

STOP 1

`Lands on /minta`

Site staff who need materials. You raise the requisition and you are the one who fixes it if it comes back.

- [x] Raise a requisition with line items, quantities and suppliers
- [x] Attach quotes, invoices or photos
- [x] Track where it is sitting and for how long
- [x] Nudge whoever is holding it
- [x] Fix and resubmit anything sent back to you
- [ ] Cannot approve your own requisition

Project Lead

STOP 2

`Lands on /sam`

First review. You judge whether the site actually needs this, at this quantity, now.

- [x] See every requisition raised on your sites
- [x] Approve — it moves to Supply Chain
- [x] Send back to the engineer with your reason
- [x] Open every attached document
- [ ] Cannot raise or edit a purchase order

Supply Chain

STOP 3

`Lands on /mintah`

The technical check: are the specifications right, the quantities sensible, the suppliers usable?

- [x] Review anything the Project Lead cleared
- [x] Approve — it moves to the Administrator
- [x] Send back to the Project Lead
- [x] Keep the supplier list current
- [ ] Cannot raise the purchase order

Administrator

STOP 4

`Lands on /admin`

Raises the purchase order *in Odoo*, then attaches that PDF to the requisition here.

- [x] See requisitions both reviews have cleared
- [x] Attach the Odoo PO document and its number
- [x] Manage project sites and suppliers
- [ ] Cannot approve at any other stop
- [ ] Purchase orders are never created in this system

Cost Control

STOP 5

`Lands on /cost-control`

Checks the purchase order against the budget. You see the PO and the requisition behind it.

- [ ] Review the PO document and its amount
- [ ] Approve — it clears for payment
- [ ] Send back to the Administrator to correct the PO
- [ ] Cannot release payment

Finance

STOP 6

`Lands on /finance`

Disburses payment and closes the loop. Everything before you is visible and already signed off.

- [ ] See what is cleared for payment and its total value
- [ ] Record the payment — the requisition closes
- [ ] Send back to Cost Control if something is wrong
- [ ] Read the full history of every closed order

Super User

OVERSIGHT

`Lands on /admin`

Oversees the whole chain. The only role that can act at any stop and manage people.

- [ ] Add people and set their roles
- [ ] Act at any stop to unblock a stuck requisition
- [ ] Read the audit trail across every order
- [ ] Manage email templates and workspace settings

03 — FOR ENGINEERS

Raising a requisition

Everything the reviewers need should be on the form. A requisition with a vague description and no quote is the one that gets sent back.

1

Open New Request

From your dashboard sidebar. The form knows who you are — you never type your own details.

2

Pick the project site

You can only choose sites you are assigned to. If the list is empty, ask an administrator to assign you — a requisition with no site cannot be costed against a budget.

3

Add your materials, one line each

Describe the material the way a supplier would recognise it — *“Iron rods 12mm, high tensile”*, not *“rods”*. Quantity, unit and unit price per line; the total is calculated for you in cedis.

MATERIALS · 2 LINES (ILLUSTRATION)

Iron rods 12mm, high tensile 70 tonnes × GH₵1,000.00 · Daniel Zoe	GH₵70,000
Cement bags, 50kg 10 pcs × GH₵500.00 · Joack Construction	GH₵5,000
Total cost	**GH₵75,000**

4

Attach your quotes

PDFs, photos, Word, Excel or CSV — up to **10 MB per file**. Every reviewer down the chain sees exactly these documents, so a clear quote here saves a send-back later. Files upload straight from your phone to storage; if signal drops mid-upload it retries on its own.

5

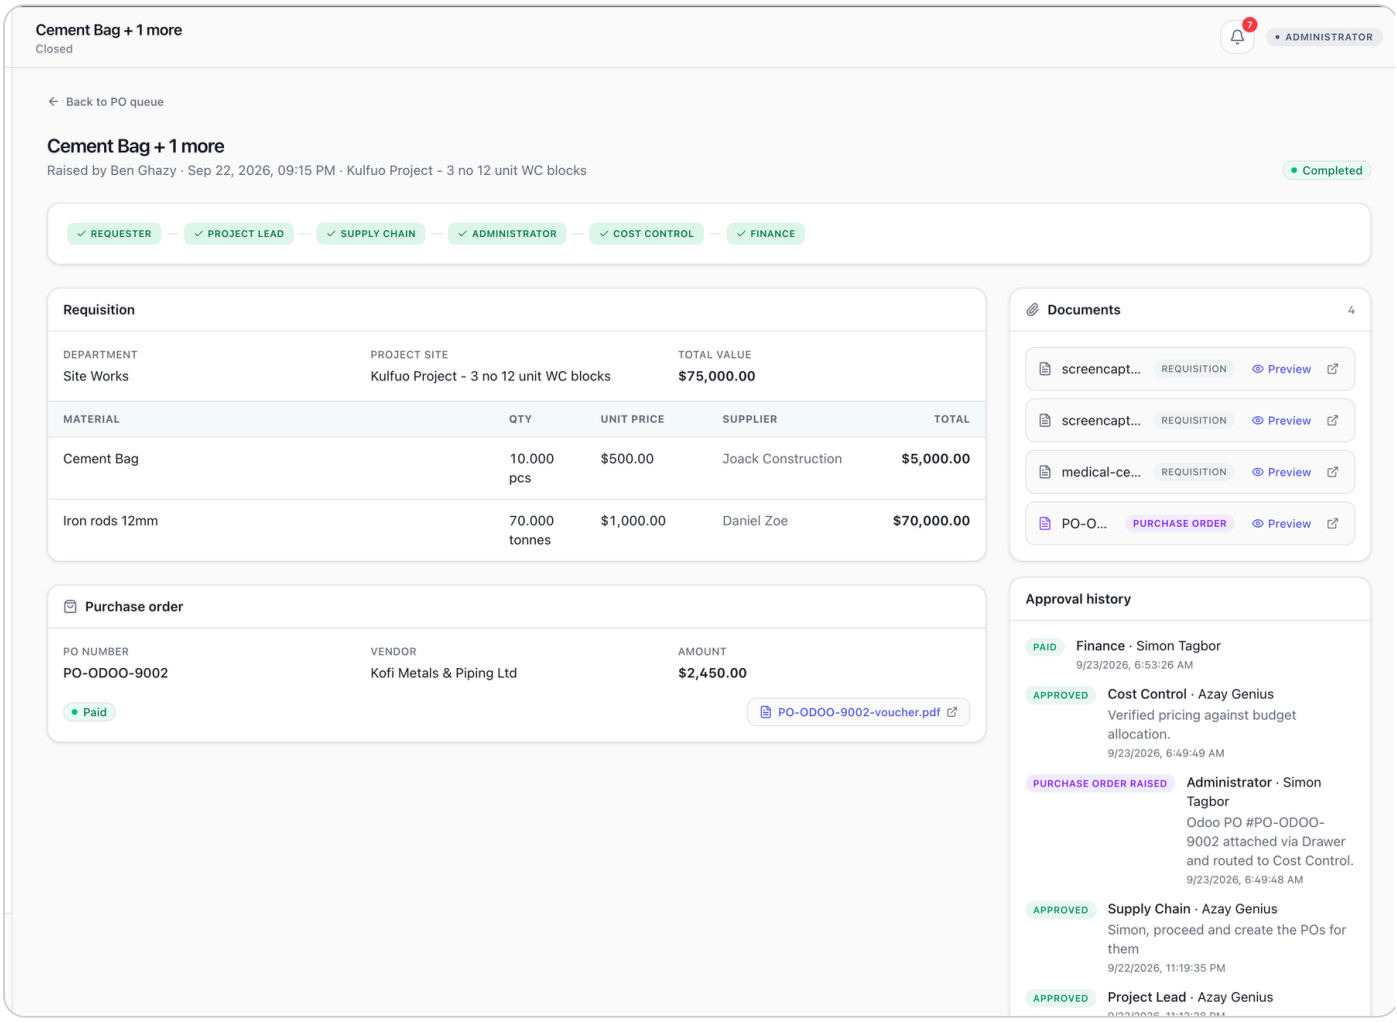

Say why in the notes

One line of justification answers the first question every reviewer asks. Then submit — it lands with your Project Lead immediately, and they are notified by email.

04 — FOR REVIEWERS

Approving and sending back

Project Lead, Supply Chain, Cost Control and Finance all work the same screen. Open **Awaiting Review** in your sidebar; the queue is ordered oldest first, because that is the one someone is waiting on.

ACTUAL SCREEN

A requisition, open. The six stops run across the top, line items and the purchase order sit on the left, and every document and decision is down the right. Amounts now display in cedis.

AWAITING REVIEW · 3 (illustration)

Scaffolding boards and couplers — Block B
Kwame Mensah · Kulfuo Project · 2 documents
WITH PROJECT LEAD

Rebar Y12 and binding wire — Foundation
Ama Boateng · Adenta Assembly · 1 document
WITH PROJECT LEAD

Site PPE replenishment — Q4
Kofi Asare · Tema Yard · 3 documents
WITH PROJECT LEAD

YOUR DECISION AS PROJECT LEAD (ILLUSTRATION)

supplier-quote-scaffolding.pdf REQUISITION

site-photo-block-b.jpg REQUISITION

Add a comment (optional) — it travels with the decision.

✓ Approve | ↺ Send back

Your comment is the whole point

It is optional, but it is what the next person — or the engineer fixing a send-back — actually reads. “Quantity looks high for one block, confirm with the foreman” saves a phone call. Every comment is kept against your name, permanently.

Send back means “fix this”, not “no”

It returns the requisition one stop, to the person best placed to correct it. Say what needs changing, or it will come back to you unchanged.

05 — FOR ADMINISTRATORS

Attaching the purchase order

ProcureFlow does not create purchase orders. You raise the PO in **Odoo** as usual, then attach that document here so the rest of the chain can see it.

1

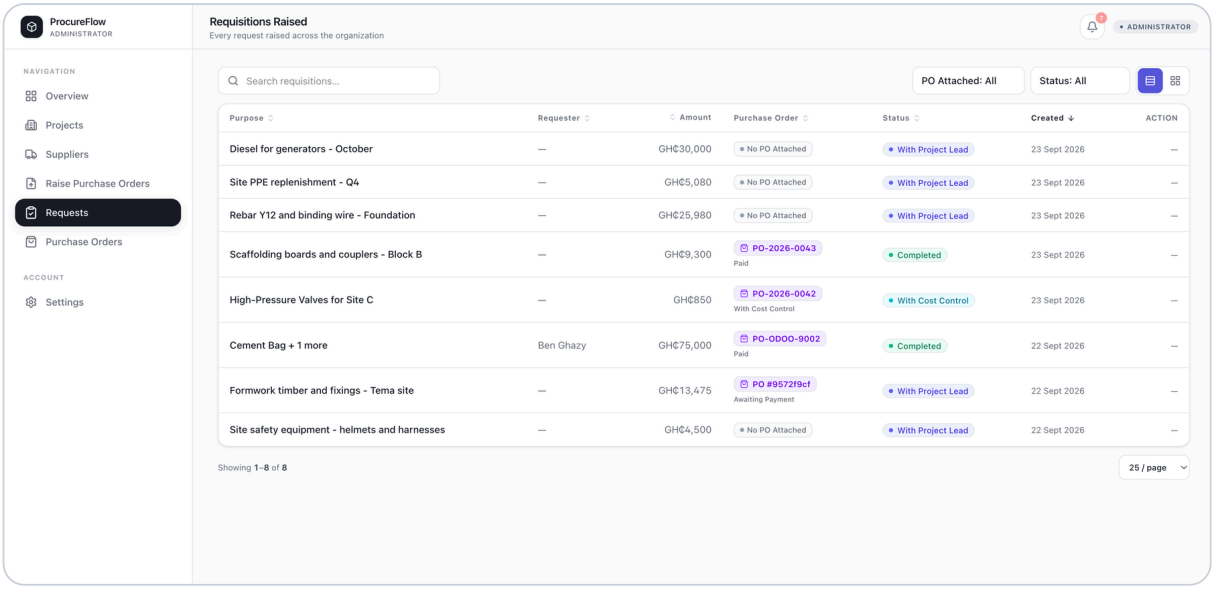

Open the requisition from Requisitions

Anything showing AWAITING PO DOCUMENT has cleared both reviews and is waiting on you. Nothing else can have a PO attached.

2

Find it in Requisitions

The list shows every requisition with its purchase order, its stop and an action column. Only the rows waiting on you offer **Attach PO**.

ACTUAL SCREEN

Requisitions, as an Administrator sees them. Rows already carrying a PO show its number; the rest read “No PO attached”.

3

Raise the PO in Odoo

Use the requisition's line items and total as your source. Download or print the PO as a PDF.

4

Attach it with its number

Enter the Odoo PO reference, the vendor and the amount, then upload the PDF.

ATTACH PURCHASE ORDER (ILLUSTRATION)

Odoo PO reference	PO-2026-0043
Vendor	Kofi Metals & Piping Ltd
Amount	GH₵75,000

PO-2026-0043-voucher.pdf PURCHASE ORDER

5

Attaching it is your approval

There is no separate approve button at this stop. The moment the document is attached, the requisition moves to Cost Control and they are notified. Check the PDF before you upload it.

06 — WHEN SOMETHING IS WRONG

How a send-back travels

A send-back goes to the stop immediately before the one that sent it — the person who can actually fix the problem. An engineer is never asked to correct a purchase order they have no access to.

SENT BACK BY	GOES TO	BECAUSE THAT IS WHO CAN FIX IT
Project Lead	**Engineer**	The requisition itself needs changing
Supply Chain	**Project Lead**	The justification or scope is in question
Administrator	**Supply Chain**	Specifications or supplier need revisiting
Cost Control	**Administrator**	The purchase order needs correcting
Finance	**Cost Control**	The budget approval needs revisiting

> **It resumes where it bounced — it does not start over**
>
> If Cost Control sends an order back to the Administrator and the PO is corrected, it returns straight to Cost Control. The Project Lead and Supply Chain approvals still stand; nobody is asked to sign off twice on something they already cleared.

07 — STAYING INFORMED

Tracking and reminders

Open any requisition you raised and the status timeline tells you, in one line, who is holding it and for how long — then shows every decision made so far with its comment.

STATUS TIMELINE (ILLUSTRATION)

Waiting with Cost Control for 3 days.

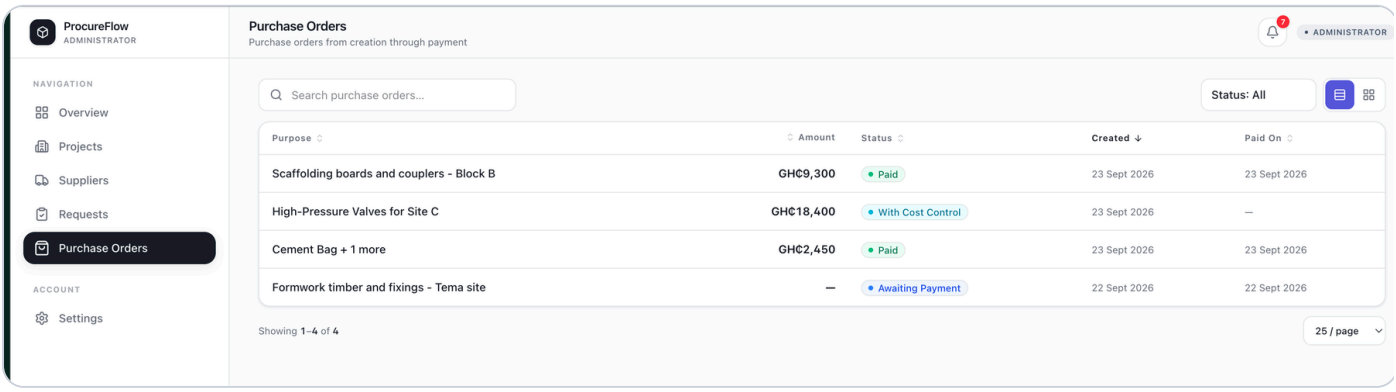

Project Lead · Azay Genius
22 Sep, 23:12
"Approved — Block B is behind schedule, this is needed."

Supply Chain · Azay Genius
22 Sep, 23:19
"Specs confirmed with the supplier."

Administrator · Simon Tagbor
23 Sep, 06:49
"Odoo PO PO-2026-0043 attached."

Cost Control HERE NOW
Waiting since 23 Sep, 06:49

Finance
Disburses payment and closes the requisition

ACTUAL SCREEN

Purchase orders from creation through payment. The status pill is the same vocabulary used everywhere else, so a glance tells you which stop each one is at.

The Remind button

On your requisition and on the tracking list. It emails and alerts *everyone* who can act at the stop currently holding it — it names them on the button, so you know who you are chasing before you press it.

One reminder every six hours

Deliberately. A reminder people can spam is a reminder people learn to ignore. The button also goes quiet when the requisition is sitting with *you*, or is already closed.

08 — WORTH KNOWING

The rules the system enforces

These are not conventions anyone can bend — the system refuses them outright.

RULE	WHAT IT MEANS FOR YOU
No skipping stops	A requisition appears in your queue only when the stop before you has approved it. It cannot be rushed ahead by anyone.
No self-approval	You cannot approve a requisition you raised, and the Administrator who attaches a PO cannot approve it at Cost Control.
Every decision is recorded	Approvals, send-backs, the PO attachment and the payment all carry a name, a timestamp and any comment. Nothing can be removed.
Everything is in cedis	All amounts are Ghana cedis (GH₵). There is no currency selector to get wrong.
Documents follow the requisition	What the engineer attached is visible to every later stop, and the PO document joins it from the Administrator onward.
10 MB per file	PDF, JPG, PNG, WebP, HEIC, Word, Excel or CSV. Anything else is refused before it uploads.
Your documents are yours	Engineers can open documents on their own requisitions only. Reviewers see the ones in their chain.

09 — QUESTIONS

Common questions

I was added to ProcureFlow. How do I get in? -

You will get an invitation email. Follow it to the sign-up page and register using **the exact email address the invitation was sent to** — a different address creates a stranger with no role and no access. You choose your own password; nobody sets one for you.

My requisition came back to me. What now? -

Open it. The reason is at the top of the approval history, written by whoever sent it back. Edit the requisition to address it, then press **Resubmit for review**. It goes straight back to the person who sent it back — not to the beginning.

Why can't I see a requisition someone told me about? -

Almost always because it has not reached your stop yet. Your queue shows only what is waiting on you. Ask them to check the status timeline — it names who is currently holding it.

The project site list is empty when I raise a request. -

You have not been assigned to a site. Ask an administrator to add you under Project Sites; it takes them a moment and applies immediately.

My upload keeps failing on site. -

Check the file is under 10 MB and is a supported type — the error will say which one it is. On weak signal the upload retries itself, so give it a moment before trying again. Photographing a quote instead of scanning it usually produces a much smaller file.

Can a purchase order be created inside ProcureFlow? -

No, and it is not meant to be. Purchase orders are raised in Odoo. ProcureFlow holds the approval trail and the document, so everyone can see which PO belongs to which requisition.

Someone has left the company. What happens to their requisitions? -

A Super User deactivates the account. Past decisions stay in the history under their name — the trail is never rewritten — but they stop receiving work and can no longer sign in.
